Read Me First

What this pack holds, the position at handover, and where to start

National Information Technology Development Agency · Office of the Director-General/CEO · DGO Digital Operations

Document	Read Me First
Reference	NITDA-FOLIO-HO-00
Version	1.0
Date	20 October 2026
Classification	Internal
Built from	Repository dgoeaa/ECM_DOCS_DEV, commit c6e49d73
Build	v2026.10.20-1 (Workspace and Portal packages)
Register of record	Version 1.12.87: 0 open, 122 closed

1. Purpose of this pack

This pack hands over NITDA Folio as commissioned on 19 October 2026. It holds the Commissioning Report and the records behind it, the complete documentation, the Power Automate flows and their packages, and the full source of every application and tool. It contains no signed flow address, so it may be shared within the Agency.

Two companion packages go with it (section 6): the confidential **Deployment Kit**, which holds the two site uploads, and the **Administrator Toolkit**, which holds the platform team's tools ready to run.

2. Position at handover

Area	Position
Readiness registers	0 open, 122 closed across the three registers
Deployed applications	Browser suite against the deployed Workspace and Portal: 159 passed, 0 failed
Notifications	All 38 notifications Folio sends passed, each with its run and delivery record
Power Automate flows	43 Folio flows in the tenant: 42 running, and the former library intake, which was replaced, off by design
Flow packages	All 27 packages of release 41 running in the tenant at their released version
Administrator tools	One suite, the Central Administration Centre with the Folio Vault, watching every Folio flow; the defects found were corrected

3. Two actions for the owner

1. **Upload the Workspace build** in the Deployment Kit to folio-platform.page.gd, as its instructions describe. This brings the site to the commissioned build and publishes the Correspondence Mailer.
2. **Switch staff notifications on** when your testing is finished. Until then every automated notice for staff goes to the registry mailbox. The steps are in the Commissioning Report, section 13.

4. Contents of this pack

Each item carries a reference. Its number is its place in the pack: 1.1 is the first item in folder 01.

Ref	Item	What it holds
00	Read Me First	This document: the position at handover, the contents and where to start
01	**Commissioning**	**Folder: the commissioning record**

Ref	Item	What it holds
1.1	Folio Commissioning Report	The declaration, the scope, how each part was verified, the defects found and corrected, and the position at handover, with an acceptance page
1.2	Folio Registers (workbook)	Every readiness item, governance and flow truth finding, notification, flow, package, application and tool, with its status and evidence
1.3	Supporting Evidence	The 17 records the Commissioning Report cites, with their index (00 Evidence Index)
02	**Documentation**	**Folder: how Folio is built, run and used**
2.1	Folio Handbook	The complete documentation in one volume
2.2	Folio User Guide	For staff: signing in, finding your way, tasks by role, getting help
2.3	Folio Administrator Guide	People and roles, server-side settings, monitoring, deployment, troubleshooting
2.4	Folio Developer Guide	Architecture, components, data model, service contracts, development
03	**Power Automate Flows**	**Folder: the flows Folio runs**
3.1	Folio Flow Catalogue	Every Folio flow in the tenant (43): what it does, how it starts, its state and its package
3.2	Folio Flow Package Guide	What a package is, how one is applied, the release history, and what each package changes
3.3	Flow Packages	The 34 released packages, in four folders: 1 Folio Workspace (15), 2 Document Portal (7), 3 Scheduled and Event-Driven (5), 4 Correspondence Mailer (7)
04	**Applications and Tools**	**Folder: the software**
4.1	Running the Administrator Tools	The platform team's suite, the Central Administration Centre with the Folio Vault: what each part is for, and how to run it from the Administrator Toolkit or the source
4.2	Folio Source Code (commit c6e49d73)	The complete source of every application and tool at the commissioned commit
4.3	Correspondence Mailer Package 2.1.5	The Mailer's release package: the application, its flows and its setup guide
	Checksums.txt	The SHA-256 checksum of every file in the pack

5. Where to start

If you are	Read
The owner or management	1.1 Commissioning Report: the declaration (section 2) and the actions after handover (section 13)
An auditor	1.1 Commissioning Report, then 1.2 Folio Registers and 1.3 Supporting Evidence
A member of staff	2.2 Folio User Guide

If you are	Read
An administrator	2.3 Folio Administrator Guide, then 4.1 Running the Administrator Tools and the Administrator Toolkit
A developer or the platform team	2.4 Folio Developer Guide, 3.1 Folio Flow Catalogue and 3.2 Folio Flow Package Guide, then 4.2 the source code

2.1, the Folio Handbook, holds all of the documentation in one volume; 2.2 to 2.4 are drawn from it for each reader.

6. Companion packages

Package	Classification	Holds
NITDA Folio Deployment Kit	**Confidential**	The two site uploads, their deployment instructions and their checksums. The uploads carry signed flow addresses, which work like passwords for their flows: keep the kit private, and delete its files once the uploads are done.
NITDA Folio Administrator Toolkit	Internal	The platform team's suite, the Central Administration Centre with the Folio Vault, ready to run on a platform-team computer, with one start command and its guide (the same guide as 4.1). It holds no signed address or credential: the tools create their own on first start.

7. Conventions

- Times are in UTC unless marked WAT (West Africa Time, UTC+1).
- Register items are named by their identifiers (for example ITEM-91 or MANUAL-3), as in 1.2 Folio Registers.
- The master copy of every record is the repository `dgoeaa/ECM_DOCS_DEV`, branch `claude/system-remediation-gaps-ahpmsy`. This pack was built from commit `c6e49d73`. Where a document links to a file not in this pack, the link opens that file in the repository at this commit.
- To confirm a file is complete and unaltered, compare its SHA-256 checksum with the one in Checksums.txt.
